Centre for Project Governance

The Centre for Project Governance (CPG) is designed to integrate governance and management of project environments with an organization's overall governance and accountability framework. This integrated approach strengthens the organization's capacity to successfully conceive and execute required projects in support of organizational objectives.

Our Mission

The mission of the Centre for Project Governance is to support corporations, not-for-profit, as well as municipal, provincial and federal government departments in ensuring their project capacity through the use of a governance structure and a set of project management methods, processes and systems reinforced by necessary training. This approach and its components can be customized to the client's needs and expectations taking into account their specific level of experience.

Our Practice Leaders

The CPG is led by Bill Bates and Tom Flynn, who have a long history of project management consulting, services, methodology development and training in Canada, United States and elsewhere. With deep experience in governance of project environments, they deliver dynamic training courses and consulting services for the CPG.

Our Services

Project Management Training

The project management workshops are designed to assist you in grooming your staff to successfully select, plan, execute, control and close out projects. At the core of our training, is our Project Management Methodology (PMM) which is compliant with the standards established by the Project Management Institute.

Professional Development units (PDUs)

All CPG project management courses effectively implement the standards of PMI. Building Blocks grants Professional Development units (PDUs) in accordance with the requirements of PMI.

Custom Solutions

All of our services can be customized, adapted and scaled to meet your specific needs: from training and methodology to project management software templates. Our tailored solutions can accommodate both large or small projects and are designed to integrate best-in-class methodologies and software solutions with your current processes in order to minimize change and the impact on your operations.

Managed Services

We provide needs assessments, recommendations, implementation and support of project management methods, processes and procedures that fit with our clients' existing processes and systems and offer an end-to-end, turnkey project management solution for projects of all sizes.

We are prepared to provide a full or part of a project management team required to manage your project, ranging from the management of your resources, to providing technical and professional services to achieve the project's outcomes.

Project Management Methodology

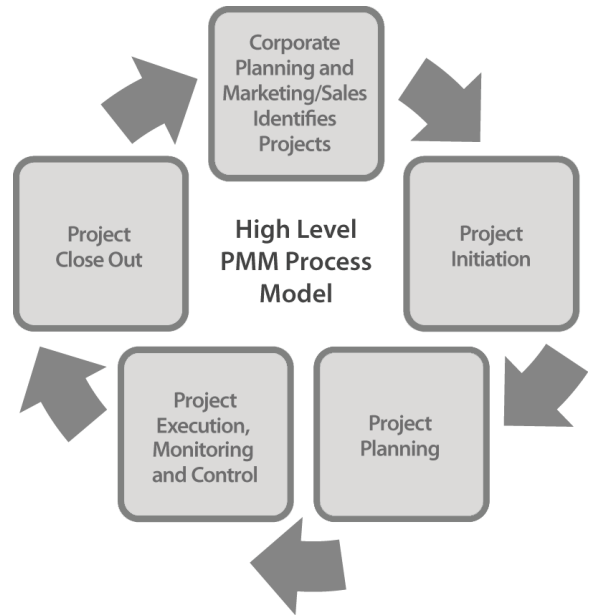

The heart of the Centre's solutions is the Core PMM™ which provides a practical approach to addressing the many project management challenges that Federal Government departments and agencies encounter on a daily basis. The methodology has been designed so that an organization can adopt it in its entirety or fashion specific components to their unique requirements. The Core PMM is flexible and does not force preconceived answers on an organization. Core PMM will assist an organization to implement its project management policies and objectives.

Core PMM has been designed to follow a logical process from the corporate level of project selection through to close out and benefits realization.

Leveraging PMBOK®

Core PMM does not try to cover every aspect of all of the knowledge areas of the Project Management Body of Knowledge (PMBOK®) published by the Project Management Institute (PMI), which has become established as a project management standard. Instead, the PMBOK lays out in great detail what needs to be done on a project in a theoretical sense while Core PMM complements these practices and acts as a catalyst by teaching how to bring these principles from concepts to actionable operations. Core PMM is best described as a practical and logical method of basic project planning and control based on the 50+ years combined experience of the authors in the project management field. In essence, Core PMM provides a "how to" guide for the project management practitioner. Organizations that adopt Core PMM will need to decide how best to adapt the methodology to their project environment.

The Centre's methodology is illustrated in the following diagram.

Building Blocks Technologies, Inc. was founded in 2003 with the mandate to provide training and consulting services to all levels of government and the business community. These services are offered across Canada and on-demand worldwide.

Through listening closely to the evolving needs of its clients, Building Blocks continues to expand and diversify its training offering to remain well aligned to market demand. This proactive adaptation is achieved through a collaborative approach between Subject Matter Experts (SME) and seasoned Training Consultants.

A natural fit for Building Blocks is to make available its SMEs to assist clients with content development and their internal training needs. In addition, Building Blocks offers consultancy services in a number of disciplines, including Management Services, Telecommunications, Security and Government Infrastructure and Policy Development.
